**RazorX** FENCING

Complete  
Fencing  
Solutions

## About Us

Started in 2012, our firm is a specialist in all forms of boundary fencing, delivering a wide range of fencing products and materials. Our customers across North East India include fencing and construction contractors; residential; the rural sector and commercial industrial and government projects.

We supply fencing materials to small and large projects all over this region, with quality products exceeding Indian Standards for a very wide range of projects and applications. Whatever your fencing or barrier needs are, we shall help you keep the costs down without sacrificing quality or service.

## Our Products

Concertina  
Coil

Reinforced  
Barbed  
Tape (RBT)

Solar  
Electric  
Fence

Chain  
Wire  
Fence

## Concertina Coil

RazorX concertina coil is a fencing barrier designed to prevent intrusion along perimeter barriers. It is easy to install and acts as a visual deterrent as well as a physical barrier. RazorX concertina wire is therefore exceedingly difficult to cut using hand tools, and is the best solution for security fencing. They are widely used for prisons, industrial sites, refineries, government

buildings, tea gardens, airports, police stations & sites of security importance.

## Reinforced Barbed Tape (RBT)

RazorX Reinforced Barbed Tape (RBT) has been developed to replace standard barbed wire in its role to deter, obstruct and protect. The more effective RBT wire consists of a steel strip reinforced with high tensile wire and having barbs at close intervals. The coils can be attached to existing barrier fences or used independently as a barrier line. The system is used widely by the military, police, tea gardens, commerce and industry. RBT is much stronger than barbed wire, and cheaper in terms of cost.

## Solar Electric Fence

When an animal or human being comes into contact with an electric fence, they receive a sharp, short, painful but safe electric shock. The shock does not cause any physical damage. The electric fence acts as a strong psychological barrier as any intruder avoid coming into contact with the electric fence once they experience the shock. Our solar energisers are

incredibly popular, as they can be used even when mains power isn't available. Many come with battery back-up, so you can be rest assured they will continue to work, even if there isn't enough sun. Their affordable costs, long-life, sustainability, flexibility of use and universal application make them a popular choice in fencing solutions.

## Chain Wire Fence

Chain wire fencing also known as chainlink, chainmesh fencing is one of the oldest forms of wire based fencing. It can be used for a variety of domestic, commercial or industrial applications including tennis court fencing, factory/building enclosures, cricket practice nets, sporting enclosures, temporary fencing, wildlife highway fencing and also for effective erosion control and rock stabilization

PROVIDING FENCING SOLUTIONS TO PRESTIGIOUS CLIENTS
